

ECG Erdgas-Consult

ECG

COMPANY
PORTRAIT

Software and services of ECG Erdgas-Consult GmbH (ECG) represent innovation and technological competence for the gas industry. On the basis of technical and practical experience, ECG offers solutions for various market roles of the European energy market. These include transmission, trading and storage systems as well as German and European cooperation and trading platforms for gas and capacities.

Since 2000, ECG has successfully performed projects throughout Germany and other European countries for leading energy industry companies and has established itself as a specialized supplier of software, consulting and process services. A team of qualified consultants and system developers supports customers of ECG with advice concerning the implementation of effective IT solutions.

ECG's key product is the **MTS software family** (Management System for Transport and Storage, Trading and Shipping). It covers all the commercial processes of the value chain, offering tailor-made solutions for transport and storage system operators, balancing network operators, gas traders and gas distributors. To provide optimal support for these different market roles, ECG has grouped the MTS system into role-specific packages that adapt flexibly to the business requirements of each group.

ECG's service portfolio is completed by individual **Internet platforms** for transparent publication of transport and booking data. These portal solutions range from pure information platforms to high available platforms for secure business transactions. Additionally, ECG supports its customers with **consulting services** and assists them to deal with current challenges from specific consulting fields of the gas industry.

In order to support power and gas market operators with solutions and know-how, Robotron Datenbank-Software GmbH and ECG form the development partnership **Robotron|ECG solutions**. Within this cooperation both companies combine their approved products into one software portfolio that is unique on the market and offers integrated IT solutions from a single source. Especially with regards to trading and networks, Robotron|ECG solutions provides comprehensive process support that is adapted to market and regulation requirements.

Based on practical experiences and professional know-how ECG masters energy industry processes and is able to detect current developments rapidly and effectively. Consequently, ECG acts as a competent partner to companies of the energy market, combining advanced information technology with distinct gas industry know-how to develop exclusive software solutions.
